Panometrics Oxygen Transmitter

The oxy.IQ is a highly reliable and cost-effective two-wire, loop-powered transmitter with a linearized 4 to 20 mA output. It measures oxygen in ten ppm ranges and seven percentage ranges. All ranges are user-selectable. This compact transmitter uses proven sensor technology to accurately measure O₂ in a variety of gases, even in hazardous environments.

Proven Sensor Technology

The oxy.IQ's oxygen sensor is an advanced galvanic fuel cell that provides superior performance, accuracy, stability and long life. The cell's innovative design eliminates the potential for negative signal output, reduces sources of contamination.

The cell is unaffected by other background gases or hydrocarbons and is compatible with acid gases (OX-2 and OX-4 cells). Recovery from air at low ppm levels takes just a few minutes. Because the cell is self-contained, minimal maintenance is required. There is no electrolyte to change or electrodes to clean.

Intrinsically Safe

When equipped with optional zener barriers, the oxy.IQ can be mounted in a hazardous (classified) location. The oxy.IQ with Intrinsically Safe option is pending certification to USA, Canadian, ATEX, and international IECEx IS requirements. The standard oxy.IQ option is pending certification to USA, Canadian, EU ATEX and International IECEx Div2/Zone 2 Non Incendive requirements.

Advanced Galvanic Fuel Cell Sensor

Control at the Tip of a Finger

The rugged oxy.IQ is controlled by a microprocessor that enables the user to select the range, trim outputs and perform calibration. Improved user interface includes user-selectable and programmable ranges, sensor diagnostics including a sensor lifetime feature and sensor raw signal, low reading/sensor failure signal and temperature compensation. Programming is easily done using the keypad and display. These keypad buttons allow complete functionality in hazardous areas when equipped with an MTL7706 barrier (certification pending).

Installation Flexibility

The compact oxy.IQ, with its built-in microprocessor, is designed to fit easily into any installation site. The oxy.IQ can be installed right at the sampling point, whereas other transmitters must be rack or panel mounted.

Sample Systems

In addition to standard features and options, GE offers a full line of sample handling systems for a variety of applications. If needed, GE can design and build a sample conditioning system to meet unique application requirements. Please contact GE for details.

Cont. = Continuous, Int. = Intermittent

(1) Recommended maximum exposure 30 minutes followed by flushing with ambient air for equal period

(2) Minimal effect on sensor performance, but produces signal interference of 1:2 ratio, ppm levels only. For example, 100 ppm NO₂ looks like 200 ppm O₂

(3) Minimal effect on sensor performance
